Harness Technology to Boost Your Business

Making a profitable growth in today's competitive climate is a challenging task for hospitals. How can a hospital thrive in this environment delivering quality care with fewer resources?

There is an enormous increase in patient demands, data and interdepartmental communications. The healthcare requirements are changing at a fast pace. The factors such as revenue leakage; overstocking; stock pilferage; discharge delays; patient dissatisfaction; human resource shortages; and lack of latest information compound these challenges.

Only a secure and robust IT infrastructure can handle the requirements, from start to finish and address the challenges quickly, without sacrificing profitability, transparency, and internal control.

Streamline the Operations, Accelerate Profitable Growth

Ellíder is an advanced Hospital Information System with optional Business Intelligence and Mobility capability designed for hospitals of any bed size.

Ellíder Advanced Hospital Information System provides a state-of-the-art, comprehensive automation solution for hospitals of any bed size. The solution automates all departments – front office, clinical, medical records (using EMR), administrative and inventory functions – of a hospital. Leveraging this foundation will enable the healthcare service provider to build the flexible service processes of today and tomorrow. With its powerful functionalities and adaptable modules, it centralizes all end-to-end processes that are needed to transcend organizational barriers and extend seamless services to the patients.

Ellíder Advanced Hospital Information System is available in three versions – Ellíder Lite, Ellíder Standard, and Ellíder Enterprise.

What Ellíder Can Do:

Streamline the operations of the hospital

Treat more patients in less time

Reduce resources and efforts to run the hospital

Stop revenue leakages

Identify the highest revenue points of the hospital

Delight the patients and medicals professionals

A Solution Designed and Developed by an Industry Leader with 25 Years of Experience

Transforming Your Hospital to Excellence

Process standardization

Improved operational efficiency

Increased productivity

Enhanced patient experience

Increased flexibility and less cost

Optimized IT spending

Faster and higher ROI

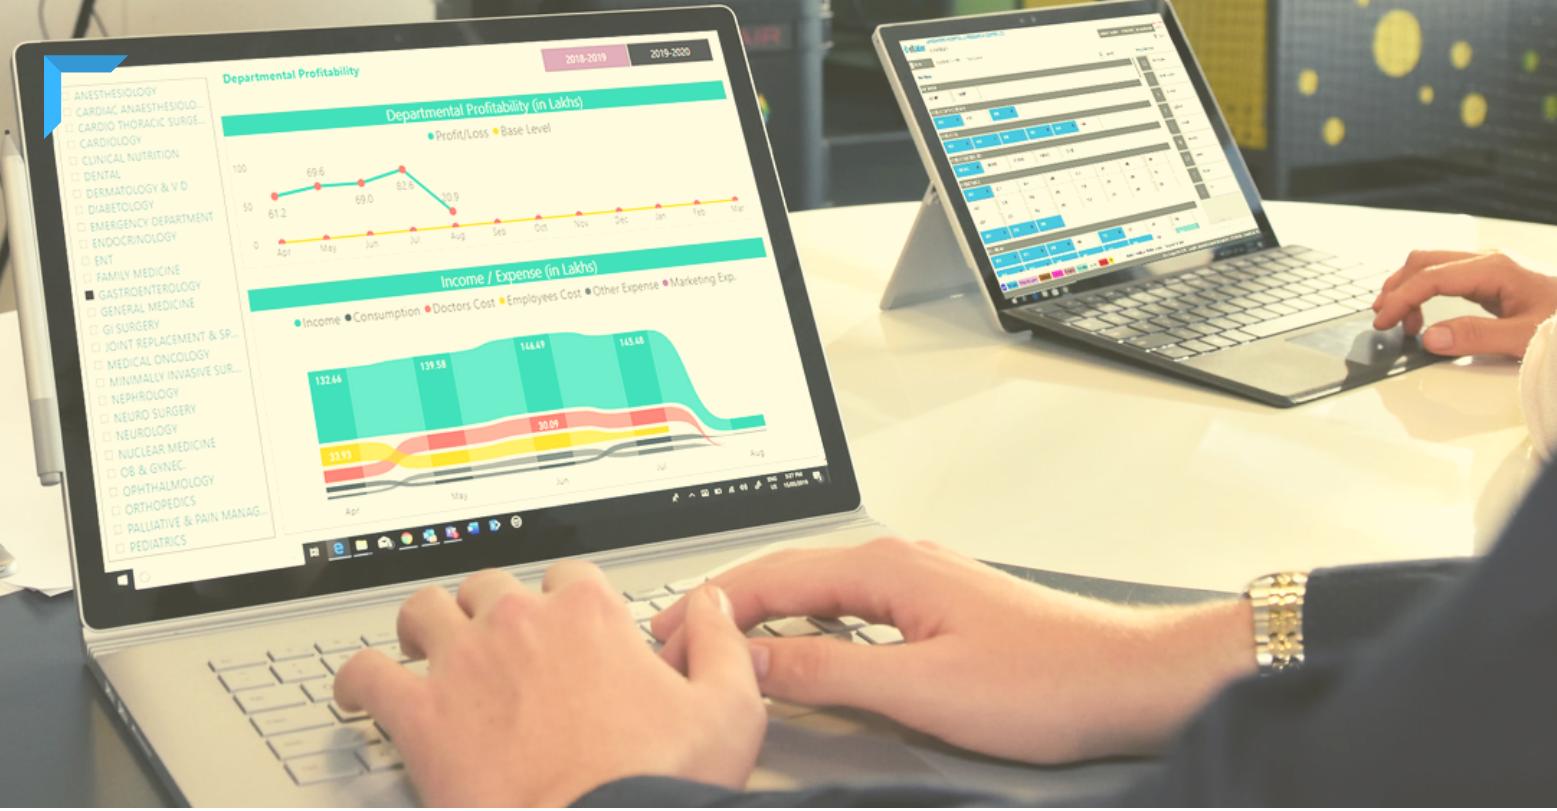

Better business

The Right Tool to Streamline the Complete Workflow of the Hospital

Adapt to Meet the Evolving Environment

Ellíder Advanced Hospital Information System adopts a sophisticated system of modules to match the different business requirements of a hospital with optional choices of customization and interfacing.

Each module addresses one key area, eliminating the hassle of integrating multiple standalone applications. Its intuitive interface and vast configurability minimize the complexities for implementation and maintenance. **For list of modules, contact.**

Essential, but Optional Extensions & Services

A set of additional extensions & services are provided as optional, to fulfil specific business requirements.

BUSINESS INTELLIGENCE (BI)

Business intelligence solution provides an edge in extracting insights from data taken from the Hospital Information System. Integrated with Ellíder Advanced Hospital Information System, BI enables the hospital management to identify risk, capitalize on opportunities and gain a deep understanding of the business with reports, dashboards, visualizations and analysis of information. BI is accessible from both on-premise/cloud with no compromise to security. The hospitals can customize it to suit their needs.

PATIENT CARE MOBILE APP

Patient Care Mobile App is designed for patients to stay connected with the hospital. The application enables the patient to book and cancel appointments, view his/her prescription, consultation summary, investigation results, and so on. The app has multi-tenancy capability allowing the patient to book appointments with any doctor in the hospital and its connected medical centres/clinics. It also works as a patient engagement tool for the hospital as the hospital can notify its special offers and news via the application to the patients.

EXTERNAL SYSTEM INTERFACING

Datamate also provides the services to connect any third-party software, sub-systems and equipment interfaces to Ellíder Advanced Hospital Information System. The equipment can range from telephone devices, kiosks machines, television displays, to laboratory equipment, PACS systems or third-party software.

About Datamate

Datamate is a market leader in enterprise application software, helping hospitals and hotels of all sizes to run at their best. Datamate harnesses the ubiquity of the worldwide web, power of the cloud and the latest advancements in Business Intelligence and Mobility to help the clients in digital transformation, thereby making them successful in delivering their service. Datamate serves nearly 600 clients across seven countries and has 120+ workforce in its offices in India, Dubai, and the UK.

What Sets Us Apart:

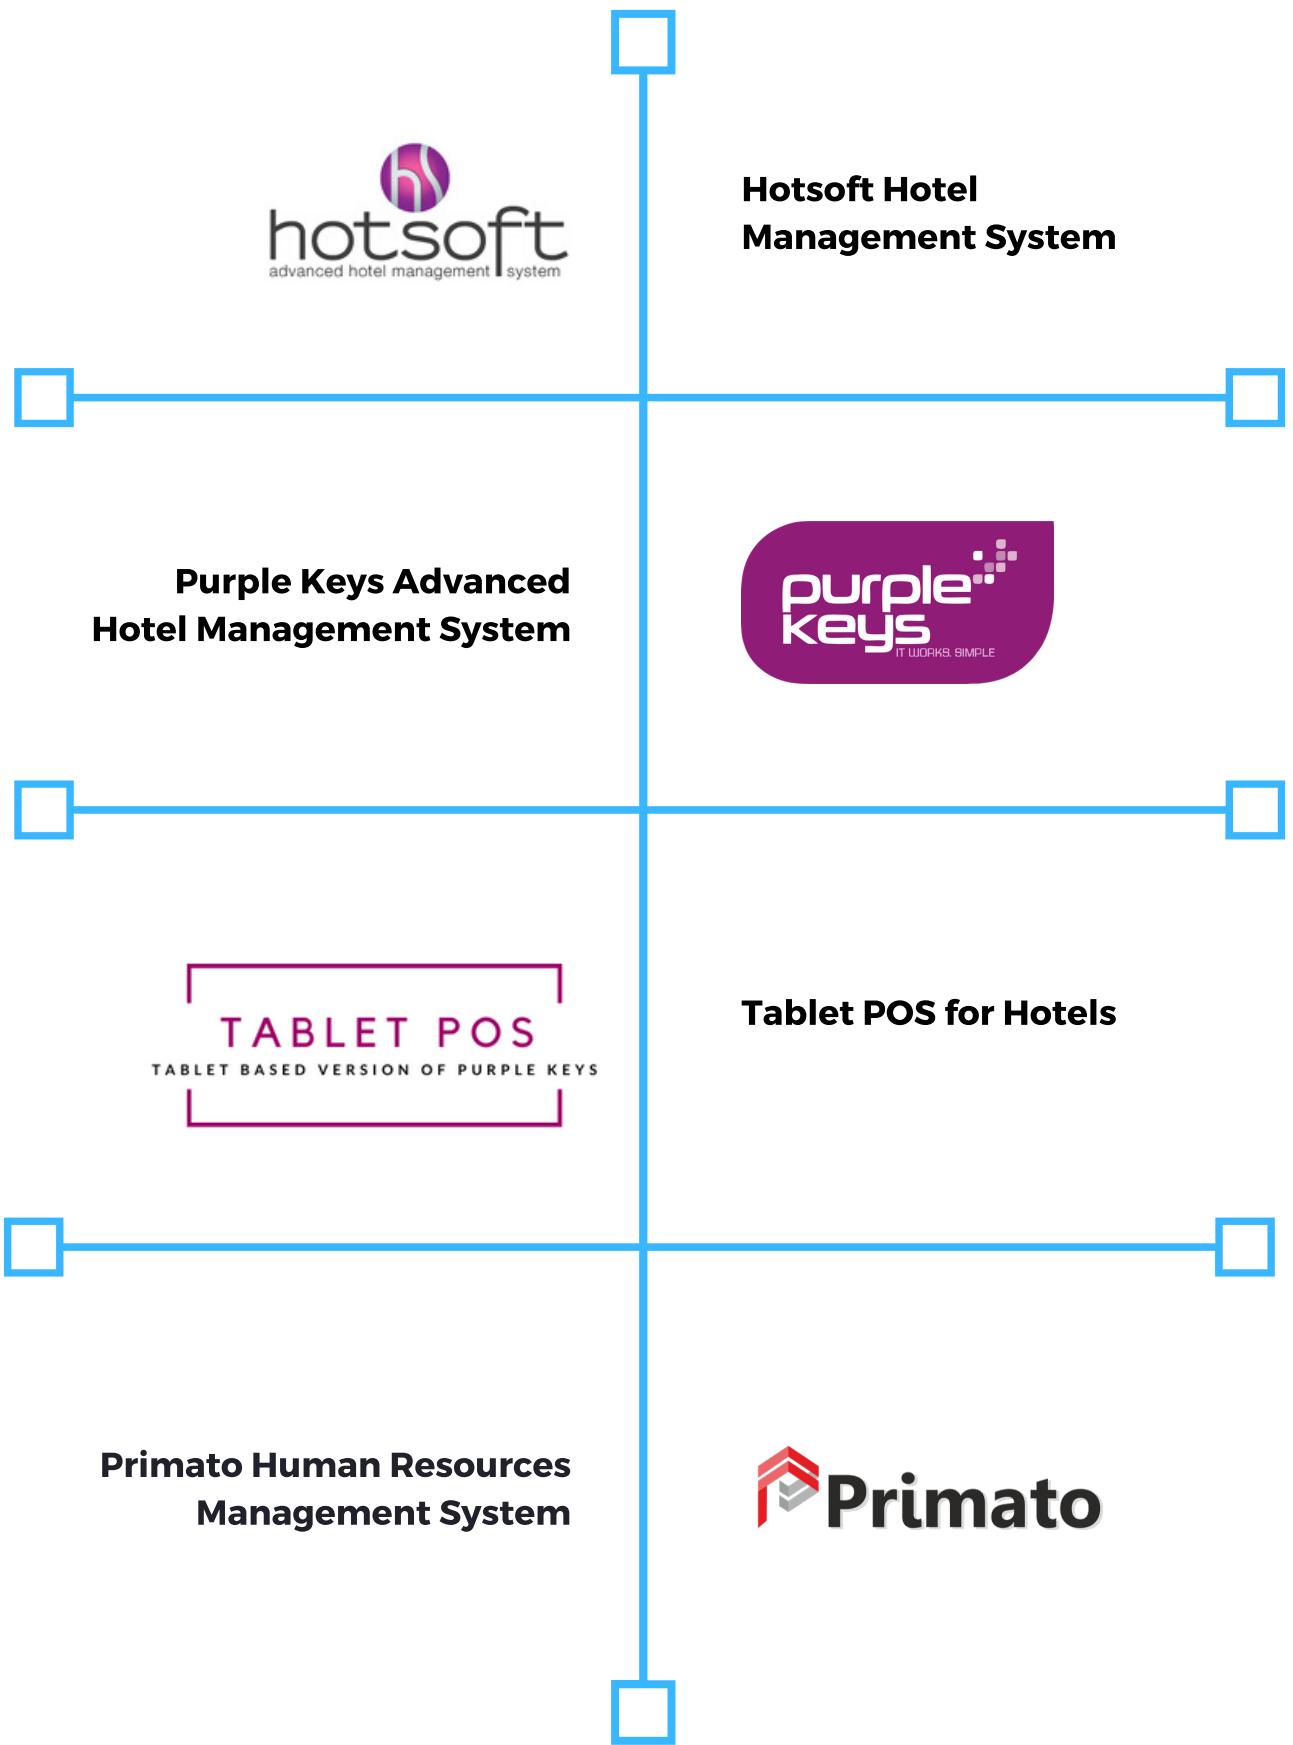

- Software specialist for hotels and hospitals
- 25 years of industry experience and domain knowledge
- A whopping client base of nearly 600
- Serving 30,000+ users in healthcare and 7000+ in hospitality
- 99% of client retention in hospitality and 96% client retention in healthcare
- Wide portfolio of services with the ease of upgrading

Why Datamate's Healthcare Products

- 157 installations worldwide
- Caters the needs of hospitals with 100-1500 bed strength
- 30,000+ users for software
- 3000+ doctors use the products
- Software manages more than 15 million patient records
- Software manages more than 40,000 outpatients and 15,000 inpatients data every day
- 200+ hospital laboratory equipment and other hardware are interfaced with the software
